Clément Pellat

Fullstack Developer · Applied AI engineer

Bangkok, Thailand (UTC+7) · +33 6 95 53 55 47 · clement.pellat@gmail.com · linkedin.com/in/clement-pellat · corysam.github.io

4+ years building and shipping production web applications (TypeScript, Node.js/Nest.js, React), from API design to Docker deployments and Linux server administration. Since 2025, focused on LLM-powered agents and workflow automation for businesses. **Available now for remote roles (permanent, contract or freelance); relocating to France in February 2027.**

EXPERIENCE

Freelance Fullstack & AI Automation Developer · Remote, from Bangkok *Nov 2024 – Present*

Data Inceptio — AI Agents Developer (Apr – Dec 2025)

- Built and deployed a conversational assistant on Data Inceptio's public website, guiding visitors through training offers, events and company news.
- Developed an AI agent connected to the company's Odoo CRM that produces summaries and answers questions from the executive committee.
- Created competitive-intelligence agents that monitor competitors' activity and deliver regular summaries.
- Stack: Swiftask and n8n — LLM calls, tool integrations and multi-step workflows replacing manual processes.

Carquefou Échecs — Fullstack Developer (Nov 2024 – Mar 2025)

- Designed and built a headless architecture: Strapi CMS back-end and React front-end, deployed to production.
- Led the migration from a legacy Drupal CMS: redesigned the content schema, wrote data-transformation and migration scripts, and shipped with zero content loss.

FullStack Developer — Daveo (IT consulting) · Nantes, France *Jan 2023 – Apr 2024*

Nantes Métropole — Java Developer

- Built a Java tool to retrieve and consolidate data from the Microsoft REST API, integrated with Eclipse BIRT for advanced reporting and data visualisation.
- Ran the technical feasibility study and comprehensive testing that validated the project.

INSEE — React Developer

- Modernised the front-end of the LEI (Legal Entity Identifier) management application, significantly reducing technical debt and improving maintainability.

Fullstack Developer — Dream And Achieve (Makidoo) · Nantes, France *Mar 2021 – Dec 2022*

- Technical referent across back-end and front-end projects; supported and reviewed the work of external contractors.
- Built and maintained Nest.js APIs and a React/Redux front-end, improving user experience and reducing technical debt.
- Implemented a customisable white-label solution for Makidoo, serving multiple client brands from one codebase.
- Owned deployments (Docker Swarm, GitLab CI) and Linux server administration for development and production environments.

SKILLS

Back-end: Node.js, Nest.js, TypeScript, REST API design, SQL / PostgreSQL, Python, Java, C

Front-end: React, Redux, TypeScript, headless CMS (Strapi)

AI & automation: LLM APIs (OpenAI, Anthropic), agent and workflow orchestration (n8n, Swiftask), prompt design, tool/function calling, RAG, vector search, evals, observability

Infra & tooling: Docker, Docker Swarm, GitLab CI/CD, Linux administration, Bash, Git, Grafana; daily use of AI coding agents (Claude Code / Cursor)

EDUCATION

Epitech — Master's degree, Expert in Information Technology · Nantes *2016 – 2021*

Beijing Jiaotong University — School of Software Engineering (exchange year) · Beijing *2019 – 2020*
